(54) Title: INTENTIONAL ADDRESSING AND RESOURCE QUERY IN A DATA NETWORK

(57) Abstract: In a method and a system for arriving quickly at desired resources in a data network, a user states a resource query in rich language in a first line user interface attached to the data network. At least one layer for dynamic communication and handling, implemented at a network context operator, then processes the resource query and uncovers the intention of the user, through processing in accordance with for instance user specific information and special handling algorithms. Thereafter, the layer establishes a connection to the specific address of the resource in question.
